Professional Summary

Backend Developer with 2+ years of experience building production-grade Java and Spring Boot applications across e-commerce and enterprise HR domains. Proven ability to design secure RESTful APIs, architect relational database schemas, and integrate third-party services including payment gateways and push notification systems. Delivers clean, modular code with a focus on performance, security, and maintainable architecture.

Technical Skills

Languages: Java, MySQL

Frameworks & Libraries: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, Maven

API Development: RESTful API Design, JWT Authentication, OAuth 2.0, Swagger / OpenAPI

Databases: MySQL, Schema Design, Query Optimization, Indexing

Integrations: Razorpay Payment Gateway, Firebase Cloud Messaging (FCM)

Testing & Quality: JUnit, Postman, API Testing

Tools & Platforms: Git, GitHub, IntelliJ IDEA, Microservices Architecture

Work Experience

Simats Engineering

Backend Developer

Feb 2024 – Present

Chennai, India

- Architected and delivered scalable backend services using **Java Spring Boot**, applying modular design and separation-of-concerns principles across multiple production applications.
- Designed and exposed **30+ RESTful APIs** consumed by web and Android clients, covering core business flows including authentication, data management, and transactional operations.
- Implemented **JWT-based authentication and role-based access control (RBAC)**, securing API endpoints across multiple user roles and preventing unauthorized access to backend services.
- Engineered **MySQL database schemas** from scratch — including entity relationships, indexing strategies, and query optimization — resulting in consistent sub-300ms API response times.
- Integrated **third-party services** including payment gateways and push notification systems, handling server-side validation, signature verification, and event-driven processing.
- Collaborated closely with frontend and mobile development teams to define API contracts, resolve integration issues, and ship end-to-end features on schedule.

Projects

Spare Finds — E-Commerce Platform (Backend)

Tech Stack: Java, Spring Boot, Spring Security, MySQL, Razorpay, Firebase FCM, JWT, REST APIs

- Built the complete backend for a two-wheeler spare parts marketplace, delivering **RESTful APIs** for product catalogue, cart management, order lifecycle, and user authentication from initial design to production deployment.
- Integrated **Razorpay Payment Gateway** with server-side **HMAC-SHA256 signature verification**, ensuring tamper-proof payment validation and full transaction integrity across all order flows.

- Designed a normalized **MySQL schema** supporting product inventory, multi-status order tracking, and user data — optimized with indexed foreign keys and efficient JOIN queries to handle concurrent transactions.
- Developed an **event-driven Firebase Cloud Messaging (FCM)** notification engine that triggers real-time push updates to users on order confirmation, payment status, and promotional events.
- Enforced **JWT-based API security** across all endpoints with stateless session management, token expiry handling, and protected routes mapped to user roles.

Simats360 — Enterprise Employee Management System (Backend)

Tech Stack: Java, Spring Boot, Spring Security, MySQL, JWT, REST APIs

- Engineered backend services for a company-wide HR platform managing **attendance tracking, leave workflows, and payroll processing** for internal operations at Simats Engineering.
- Built **20+ RESTful APIs** covering employee records, leave approval chains, salary computation, and management reporting — integrating seamlessly with web and mobile frontends.
- Implemented **JWT security with RBAC**, defining distinct access levels for Admin, HR, and Employee roles, ensuring each user interacts only with permitted data and operations.
- Designed **MySQL schemas** for attendance logs, payroll records, and leave history — including data integrity constraints and optimized queries that reduced report generation time significantly.
- Applied rigorous **server-side validation and business logic** across all modules — leave eligibility rules, payroll computation logic, and audit trail maintenance — ensuring accurate and reliable HR workflows.

Education

MRK College of Arts and Science
Bachelor of Science in Computer Science

2022
Thiruvalluvar University, Vellore

Certifications

- **Java Full Stack Development** — Accord Info Matrix Technologies Pvt Ltd, Chennai
